What is your dream laptop model and specifications? Explain what you can possibly do given the chance to acquire that unit.

My dream laptop that I've always wanted was a Thinkpad specifically the **T14 Gen 5**

Specifications:

CPU: Ryzen™ 7 PRO 8840U featuring Ryzen™ AI

OS: Windows 11 Pro

GPU: AMD Radeon™ 780M

RAM: Up to 64GB DDR5, 2 x SODIMM (5600Mhz)

STORAGE: Up to 2TB M.2 PCIe Gen 4 x 4 SSD, 2280 compatible

BATTERY:

- 52.5Whr (customer replaceable unit)

- 39.3Whr

- Rapid Charge (60 minutes = 80% capacity) with 65W or higher adapter.

DISPLAY: 14" 2.8K (2880 x 1800) OLED, 400nit, 120Hz, 100% DCI-P3, antiglare / antireflective, DisplayHDR 500 True Black, Eyesafe®-certified low blue light, Dolby Vision

The reason why I went for the T14 Gen 5 AMD is because of its upgradability, Thinkpads are known for their upgradability and how easy it is to upgrade them or replace broken parts. However, over the years they have kind of lessen that kind of feature that makes them so unique from other laptops but there are still some models that still have these capabilities. If I have the T14 Gen 5 AMD I am able to upgrade the RAM, replace the battery, and nvme SSD and if I need to troubleshoot Thinkpads are made for easy self service for me to fix my problem if I ever encounter any. The reason why I want to buy this used or after a couple of years is because these Thinkpads are used by companies and every year they get replaced with new Thinkpads, even though they are used they are made to be durable for years to come. If I get this Thinkpad after a couple of years, not only will I get the benefit of getting it cheaper I could possibly find deals where people have upgraded this laptop that is still around the same price as others that were used. This may not be connected with specifications but Thinkpads have a whole entire community (reddit) where people show off their Thinkpads and modifications they have done with theirs and I'm planning to install Arch Linux (just for fun) with mine. Windows has been known to add so much bloatware on

their operating systems and no matter how much bloatware removers I use (specifically the Christ Titus tool) there will always be some telemetry that makes my computer slower even though its just a little bit. If I acquire this unit I could experiment with Arch linux, add things I want to add, and KNOW what has been added onto my OS rather than it being automatically being installed without my permission.
